Table of contents

- Infrastructure overview
- VM migration status
- Operating system distribution
- Disks (VM count by disk size tier)
- Disks (Total disk size by tier)
- Clusters (VM distribution by cluster)
- Clusters (Cluster distribution by data center)
- Migration warnings
- Errors

Hosts	29
CPU Cores	6663
Total Memory	24 TB

⚠ Warnings

Description	Total VMs
Changed Block Tracking (CBT) has not been enabled for this device. This feature is a prerequisite for VM warm migration.	1458
For VM warm migration, Changed Block Tracking (CBT) must be enabled in VMware.	938
Static IP preservation requires the VM to be powered on.	498
The 'hostname' field is missing or empty. The hostname might be renamed during migration.	351
The guest operating system is not currently supported by the Migration Toolkit for Virtualization	743
The VM name does not comply with the DNS subdomain name format. Edit the name or it will be renamed automatically during the migration to meet RFC 1123. The VM name must be a maximum of 63 characters containing lowercase letters (a-z), numbers (0-9), periods (.), and hyphens (-). The first and last character must be a letter or number. The name cannot contain uppercase letters, spaces or special characters.	140
Hot pluggable CPU or memory is not currently supported by Migration Toolkit for Virtualization. You can reconfigure CPU or memory after migration.	190
The 'hostname' is set to 'localhost.localdomain', which is a default value. The hostname might be renamed during migration.	3

❗ Errors

Description	Total VMs
Independent disks cannot be transferred using recent versions of VDDK. The VM cannot be migrated unless disks are changed to 'Dependent' mode in VMware.	8
